Dominion  
Oilcloth  
& Linoleum

CO. LIMITED

A "MADE IN CANADA" PRODUCT is one designed and manufactured to the

# Explore Dominion

*This illustration is composed of actual pieces of linoleum chosen from Dominion's range of over 100 modern primaries, shades, tints and patterns!*

DOMINION LINOLEUM . . . more resistant to scratches . . . sheds burns . . . creates original interiors

Canadian's specific taste and use . . .

# Linoleum's Cavalcade of Colour

Dominion Linoleum "makes history" . . .

Canadian history in colour.

Just a pleasant way of bringing to your attention a few selections from the finest range of colours and patterns in North America. This picture alone is rich in inspiration for an endless variety of adventurous decorating schemes.

Explore the combination-possibilities of the lake-and-sky blues, the field-and-forest greens, the robust browns. Ideas everywhere for home and commercial decor that's as light and airy as the great outdoors!

Dominion Linoleum, with its great panorama of colours, has other enticing advantages, too . . . a smooth, easy-cleaning surface that doesn't harbour dust . . . initial low cost and the economy of good, long wear proven by 50 years of service . . .

## A "CANADIAN COMPANY"

assures you fast, efficient service,  
personal attention.

# "DO IT YOURSELF"

WITH

# Insets

The illustrations below feature several ideas to lift any floor from the ordinary. They use pre-cut, economical insets by Dominion Linoleum and they're planned for the do-it-yourself trade.

We supply, FREE OF CHARGE, a cardboard template of the insets shown. You cut out the insets for stock, or

even better, give away the template and sell a do-it-yourself kit to your customers, suggesting they do their own cutting.

*Please emphasize the importance of using the cardboard template to cut out linoleum inset in whatever colours chosen; then use this linoleum inset as a template to cut out the design in the actual floor.*

Or cut them yourself and display them in stock.

Guaranteed to be the hottest selling item on your do-it-yourself counter. Good way to use left-over yardage or tiles. Another sales promotion idea—how about distributing cardboard templates to your customers as a premium on the purchase of a certain dollar value in linoleum?

FACTS ABOUT LINOLEUM OF INTEREST TO:

the architect, the decorator, the

*Linoleum is a practical investment for large-area purchases.* Over fifty years of extensive use in schools, hospitals, business buildings and homes — and

St. Rene-Goupil School,  
Ville St. Michel, Montreal.

linoleum is still considered a safe, sure, eminently worthwhile buy.

Main reason for linoleum's continuing popularity is a simple one. Linoleum is a "natural" flooring, composed of ingredients which do not shrink, harden or otherwise deteriorate through age. This product sheds scorch marks easily, resists scuffing, ordinary scratch marks tend to fill in while more serious ones can be removed.

With newer adhesives and methods of application which simplify installation, contracting has become more proficient. With availability in several thicknesses, in sheet-goods, tiles and other cut forms, linoleum has a versatility of selection in price and quality that is difficult to match.

*Linoleum is a maintenance man's flooring.* Maintenance of floors in large areas can be costly, but if rules are followed properly, care of linoleum can save money, particularly in terms of several years. If waxed and polished correctly at the outset, linoleum need only be refinished

occasional periods and then only where traffic is heavy. Other maintenance consists mainly of mopping and polishing. Write for our easy to follow technical booklet on this subject.

**Linoleum is a decorator's flooring.** Main, due to its composition, linoleum is the most versatile flooring manufactured, in terms of design. It is easy to cut into any pattern imaginable, from simple, tailored arrangements to curved abstract motifs. It is excellent for trademark work. Linoleum on walls, table and counter faces as well as floors. For an exclusive, professionally planned design, use the services of the Dominion Linoleum Custom Design Department. You will no longer find drab "commercial" type colours in the Dominion Linoleum ranges. Modernized in recent years, they are as soft, subtle and completely blend-worthy as the most up-to-date paints, wallpapers and furnishings. Today, more than at any other time, linoleum assures you a wise investment.

# Dominion Linoleum

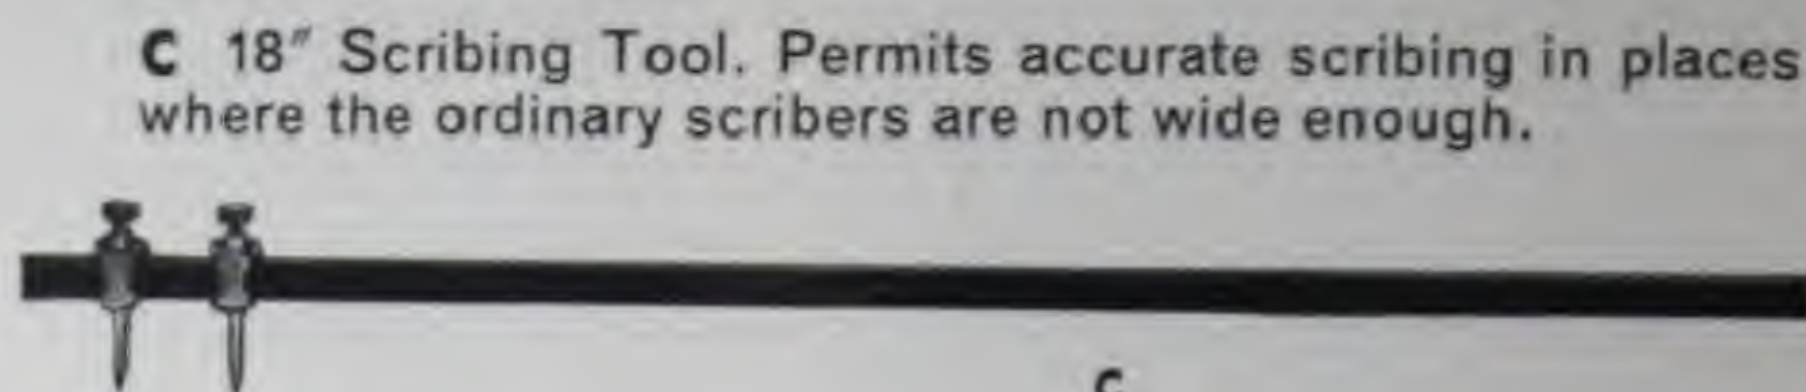

In order to obtain the best results in laying Dominion Linoleum, it is necessary to have the proper equipment. We illustrate here the complete line of laying tools and accessories which appear on our price list. Each tool is made to the specifications of experts and is standard for its individual purpose.

**A** Steel Square.

**B** Proper type of hammer for levelling seams, etc.

**C** 18" Scribing Tool. Permits accurate scribing in places where the ordinary scribes are not wide enough.

**F** Cement Spreader with detachable rubber edge.

**E** Dividers, for scribing Linoleum to be fitted around pipes, radiators, etc., also against walls and other vertical surfaces.

**G** Straight Edge. A true, solid piece of steel, 84 inches long. A perfect guide for cutting seams. Does not kink or warp and assures accurate joints.

**H** Steel Trowel, for spreading cement, especially when doing tile work with Heavy Waterproof Cement.

**I** Linoleum Truck, for handling Linoleum. All metal construction. Weight — 19½ lbs.

**J** Combination Set, for cutting seams, interliners, circles, etc., also for inside and outside scribing.

**K** Felt Paper. Dry and Impregnated (Waterproof) felt paper made in one yard wide only, 100 linear yards per roll. Dry felt paper, 12 ounces to the square yard. Impregnated paper about 24 ounces to the square yard.

**L** Linoleum Cutting Knife. Standard wooden handle with special blade 2½ inches long, designed to assist in the cutting of Dominion Linoleum for floors and walls.

**M** Special Linoleum Cutting Knife with detachable blade. Extra blades can be supplied at a nominal charge.

# Laying Equipment

**N** Waterproof Linoleum Cement assures perfect adhesion if applied properly. Comes in 4-gallon, 1-gallon, 1-quart, 1-pint and  $\frac{1}{2}$ -pint tins. Can also be supplied in larger containers. Estimate 1 gallon to 10 square yards.

NOTE: Waterproof Linoleum Cement is used to prevent surface water from seeping at the seams.

**O** Linogrip Adhesive. Recommended for cementing any type of hard surface flooring by the yard or tiles, either over wood or concrete subfloors. Supplied in 4-gallon, 1-gallon, 1-quart, 1-pint and  $\frac{1}{2}$ -pint tins. Estimate 1 gallon to 15 square yards.

**P** Dominion Liquid Wax, gives a lustrous finish to Linoleum. Available in 1-gallon and 1-quart tins.

**S** Sand Bags made of heavy duck, for weighing down seams, borders, insets, etc. Packed in lots of 12.

**R** Linoleum Roller. Made in three sections to permit even pressure and therefore better adhesion. Approximate weights — 100 and 150 lbs. Countersunk axle permits rolling close to vertical surfaces.

**T** Cove Base Scribe. This handy tool has been designed especially for use against Terrazzo Cove Base. It is small enough to permit scribing in corners too tight for standard tools.

**U** Marking Scratcher.

**Q** Pinch Bar, approximately 14 inches long. Most useful for removing quarter-round moulding without damage.

**V** Steel "toothed" spreader.

Complete kit of laying tools should include the following items: (1) Light claw hammer for removing nails. (2) 12-inch shears for cutting felt. (3) Steel pliers. (4) 1-inch wood chisel. (5) Small steel square. (6) 6-inch block plane. (7) 12-inch screwdriver. (8) Stilson wrench for disconnecting radiators, etc. (9) Chalk and chalk line for marking in laying out work. (10) Metallic measuring tape. (11) 6-foot folding rule. (12) Wide knife with 2-inch or 5-inch blade for spreading cement where space does not permit use of trowel or spreader. (13) Carborundum stone. (14) 2-inch flat file for dressing knife and a good oil stone.

# Flooring

# Installation

Linoleum, the only resilient flooring  
with actual performance testimonials  
of over 50 years — an unrivalled  
record of endurance.

Today, Dominion Linoleum not only compares favourably with other types of smooth-surfaced floorings, but in most cases shows significant advantages. Its surface is smoother than ever before, making it easier to maintain. Although we still retain our high level of quality, the area of colour has brought many changes. Through continuous design and laboratory experimentation, Dominion Oilcloth & Linoleum Co. Limited has developed methods for the mixing of linoleum ingredients which offer a greatly widened and improved colour range in all linoleum products.

## INSTALLATION NOTES

To give the best and longest service a linoleum floor should be properly laid. The information which follows covers the laying of linoleum on suspended concrete subfloors and suspended wood subfloors.

### ON SUSPENDED CONCRETE SUBFLOORS

Before the work of installing the linoleum is commenced, the concrete should be carefully swept and all lumps and irregularities removed. Where the surface is too rough for hand scraping and levelling, the building contractor should be required to put the floor in proper condition. A level floor is essential.

On standard construction, the concrete slab should have a cement topping of not less than 1 1/2 inch thickness and a mix no leaner than one part Portland Cement to three parts clean screened sand. Expansion joints that have been cut through top layer of cement must be retrowelled to furnish an even surface.

On monolith construction, the floor slab should be trowelled to a smooth finish, free from high or low spots.

If expansion joints have not been retrowelled as suggested above, they should be filled with plaster of Paris or other non-shrinkable plaster material so that joints will not show through.

If the concrete is resting on "grade" (direct on earth) it should be waterproofed. There are several ways of doing this depending upon local conditions. It is advisable to consult your architect or building contractor who will be conversant with these.

Make sure that concrete floors are tested for dampness and do not contain any fill or aggregate which will retain moisture. Use anhydrous copper sulphate to test above fills.

In no case should the installation of linoleum proceed until proper tests have shown that the concrete is dry.

### INSTALLATION OVER SUSPENDED WOOD SUBFLOORS

Any unevenness at butts or joints should be planed smooth and even and, in the case of old floors, badly worn, loose or defective boards should be replaced. Where sanding is necessary to smooth the floor surface, the floor should be sealed with a good wood primer.

Under no circumstances should linoleum be laid over any wood floor that is below grade, directly in contact with the ground or over unexcavated areas unless proper ventilation is provided between ground and floor.

In the case of new construction where the floor is laid specifically for the installation of linoleum, it should be double flooring type brought up to the proper surface below the finished floor level. The lower boards should be securely face-nailed to the joists and laid diagonally over them. The upper boards should be well dried, well seasoned tongue and groove, not less than 3/4 inch thick with a face not more than 3 1/4 inches, laid at right angles to the floor joists and toenailed at 18 inch centres with eight-penny steel-cut nails.

### PLYWOOD SURFACE

Plywood makes an excellent base for linoleum when used as the upper layer of double floors. Most suitable is Douglas Fir plywood 3/8 inch thick one side finished. Sheets up to 8' x 4' have been found practical, the idea being to have as few joints as possible. Nails should be 1 1/4" x 14-gauge spiral wire, rosin coated, if possible, spaced at 6-inch centres along the edges, within 1 inch of the joint, and at 8-inch centres through the body of the plywood in staggered rows. All nails should be countersunk.

Plywood sheets 4' x 8' are the most suitable size to handle, and the weatherproof variety should be used especially for country homes. As an added protection against damp earth have a layer of impregnated black felt paper laid between the plywood and rough tongue and groove flooring.

Lay the plywood roughside down, so that the 8' edge runs at right angles to the underfloor, and follow the instructions on this page for nailing.

Sheets should have a snug contact but should not be driven tight — they should be checked for loose spots after nailing. No opening at any joint should be more than 1/8" and all joints should be filled with a reliable filler carefully forced in the opening.

**INSTALLATION** — After the subfloor has been prepared, dry or impregnated felt paper should first be laid. This paper should be laid with carefully butted joints — all crossjoints to be staggered.

It should be cut to fit all vertical surfaces and applied to the floor with linoleum adhesive, the felt paper being thoroughly rolled into the adhesive with a linoleum roller weighing at least 100 lbs.

After the felt paper is laid, the linoleum should be cut to fit each room accurately and neatly so as to have the minimum of seams. Remember that, wherever possible, linoleum should be laid across the boards.

**FELT PAPER** — The felt paper, if dry, should weigh approximately 12 ounces per square yard. Where there is any possibility of surface dampness or moisture, impregnated felt paper with a minimum weight of 24 ounces per square yard should be used.

**FITTING** — The linoleum should be trimmed or cut to fit accurately and snugly at all walls, pipes, radiators or other fixtures by the use of scribes or dividers.

**CEMENT AND ADHESIVES** — Dominion Linogrip or Dominion Waterproof Cement, made especially for linoleum is recommended.

**SEAMS** — When laying sheet goods all lengths of linoleum should be overlapped from 1/2 inch to 3/4 inch and the seam made by cutting through both thicknesses at the same time in a straight line, either by use of a chalk line or straight edge.

For patterned linoleum, follow instructions given in our new Layers' Guide.

**WEIGHTING AND ROLLING** — Immediately after laying, the floor should be rolled from the centre out, until all air bubbles are removed and complete adhesion assured. It is recommended that a Dominion Linoleum Roller, or a linoleum roller weighing at least 100 lbs. be used — or a Dominion Linoleum Truck Roller. Sand bags can also be used but care should be taken to avoid scratching the surface.

All seams, borders or tiles should be properly weighted by use of sand bags until the adhesive has set. Edges and joints should be thoroughly rolled to assure a tight, even, workmanlike seam.

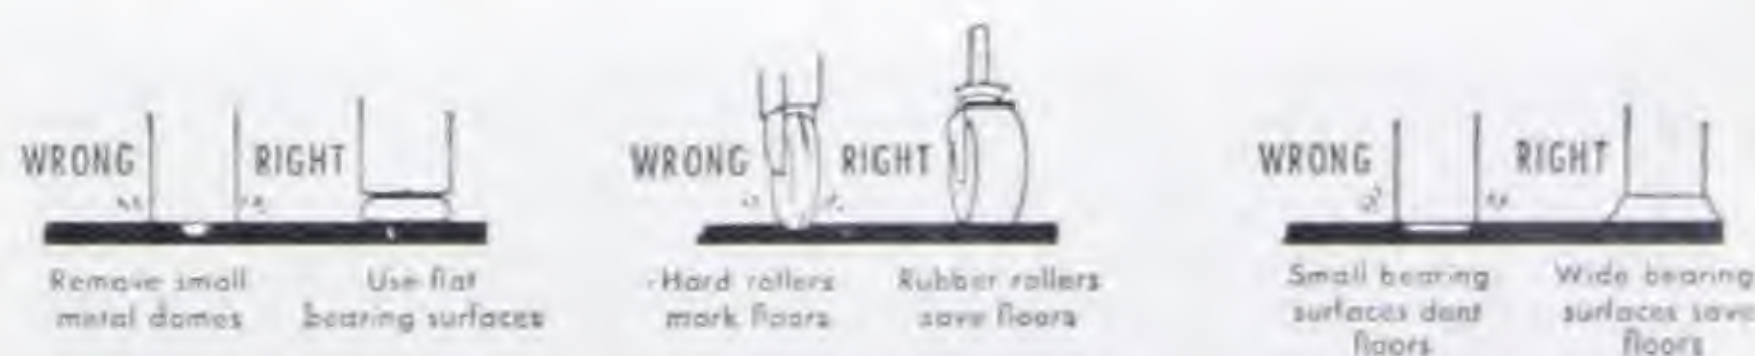

Where cross seams are necessary, they should be finished last. The linoleum should be lapped after pasting to within approximately six inches of where the seam is made. In all cases, **EXCESSIVE BENDING OF THE LINOLEUM SHOULD BE AVOIDED.**

**PROTECTION** — After floors have been inspected and approved, they should be covered with heavy paper or canvas in rooms where painting or other work is still to be done, or where there is any traffic, until the building is ready for occupancy.

After installation all traces of cement or adhesive should be removed, the floor thoroughly cleaned and then waxed and polished with Dominion Liquid Wax or its equivalent — two coats preferably. The use of varnish or other high gloss finishes is not recommended.

If further information is required regarding the installation of linoleum write for our Linoleum Installation Manual.

**GLIDERS** — All resilient floors require protection against indentation from furniture legs. To guard against spot impressions on linoleum, remove any sharp leg rests and replace with the neat, flat furniture glides sold for this purpose. Also replace hard, narrow rollers with soft, wide rubber rollers.

DOMINION LINOLEUM

# Cove Base

AND COUNTER TOPPING

*John Rennie High School, Point Claire, Que. Home Economics class;  
Linoleum Counter topping H-774.*

Streamlined floors and counters. Dominion Linoleum provides a modern solution to unattractive wall and counter edges.

With COVE BASE, surface meets wall with one sealed, hygienic and finished-looking sweep.

**COVE BASE** requires no baseboard—automatically eliminates that dust-catching joint at the floor wall.

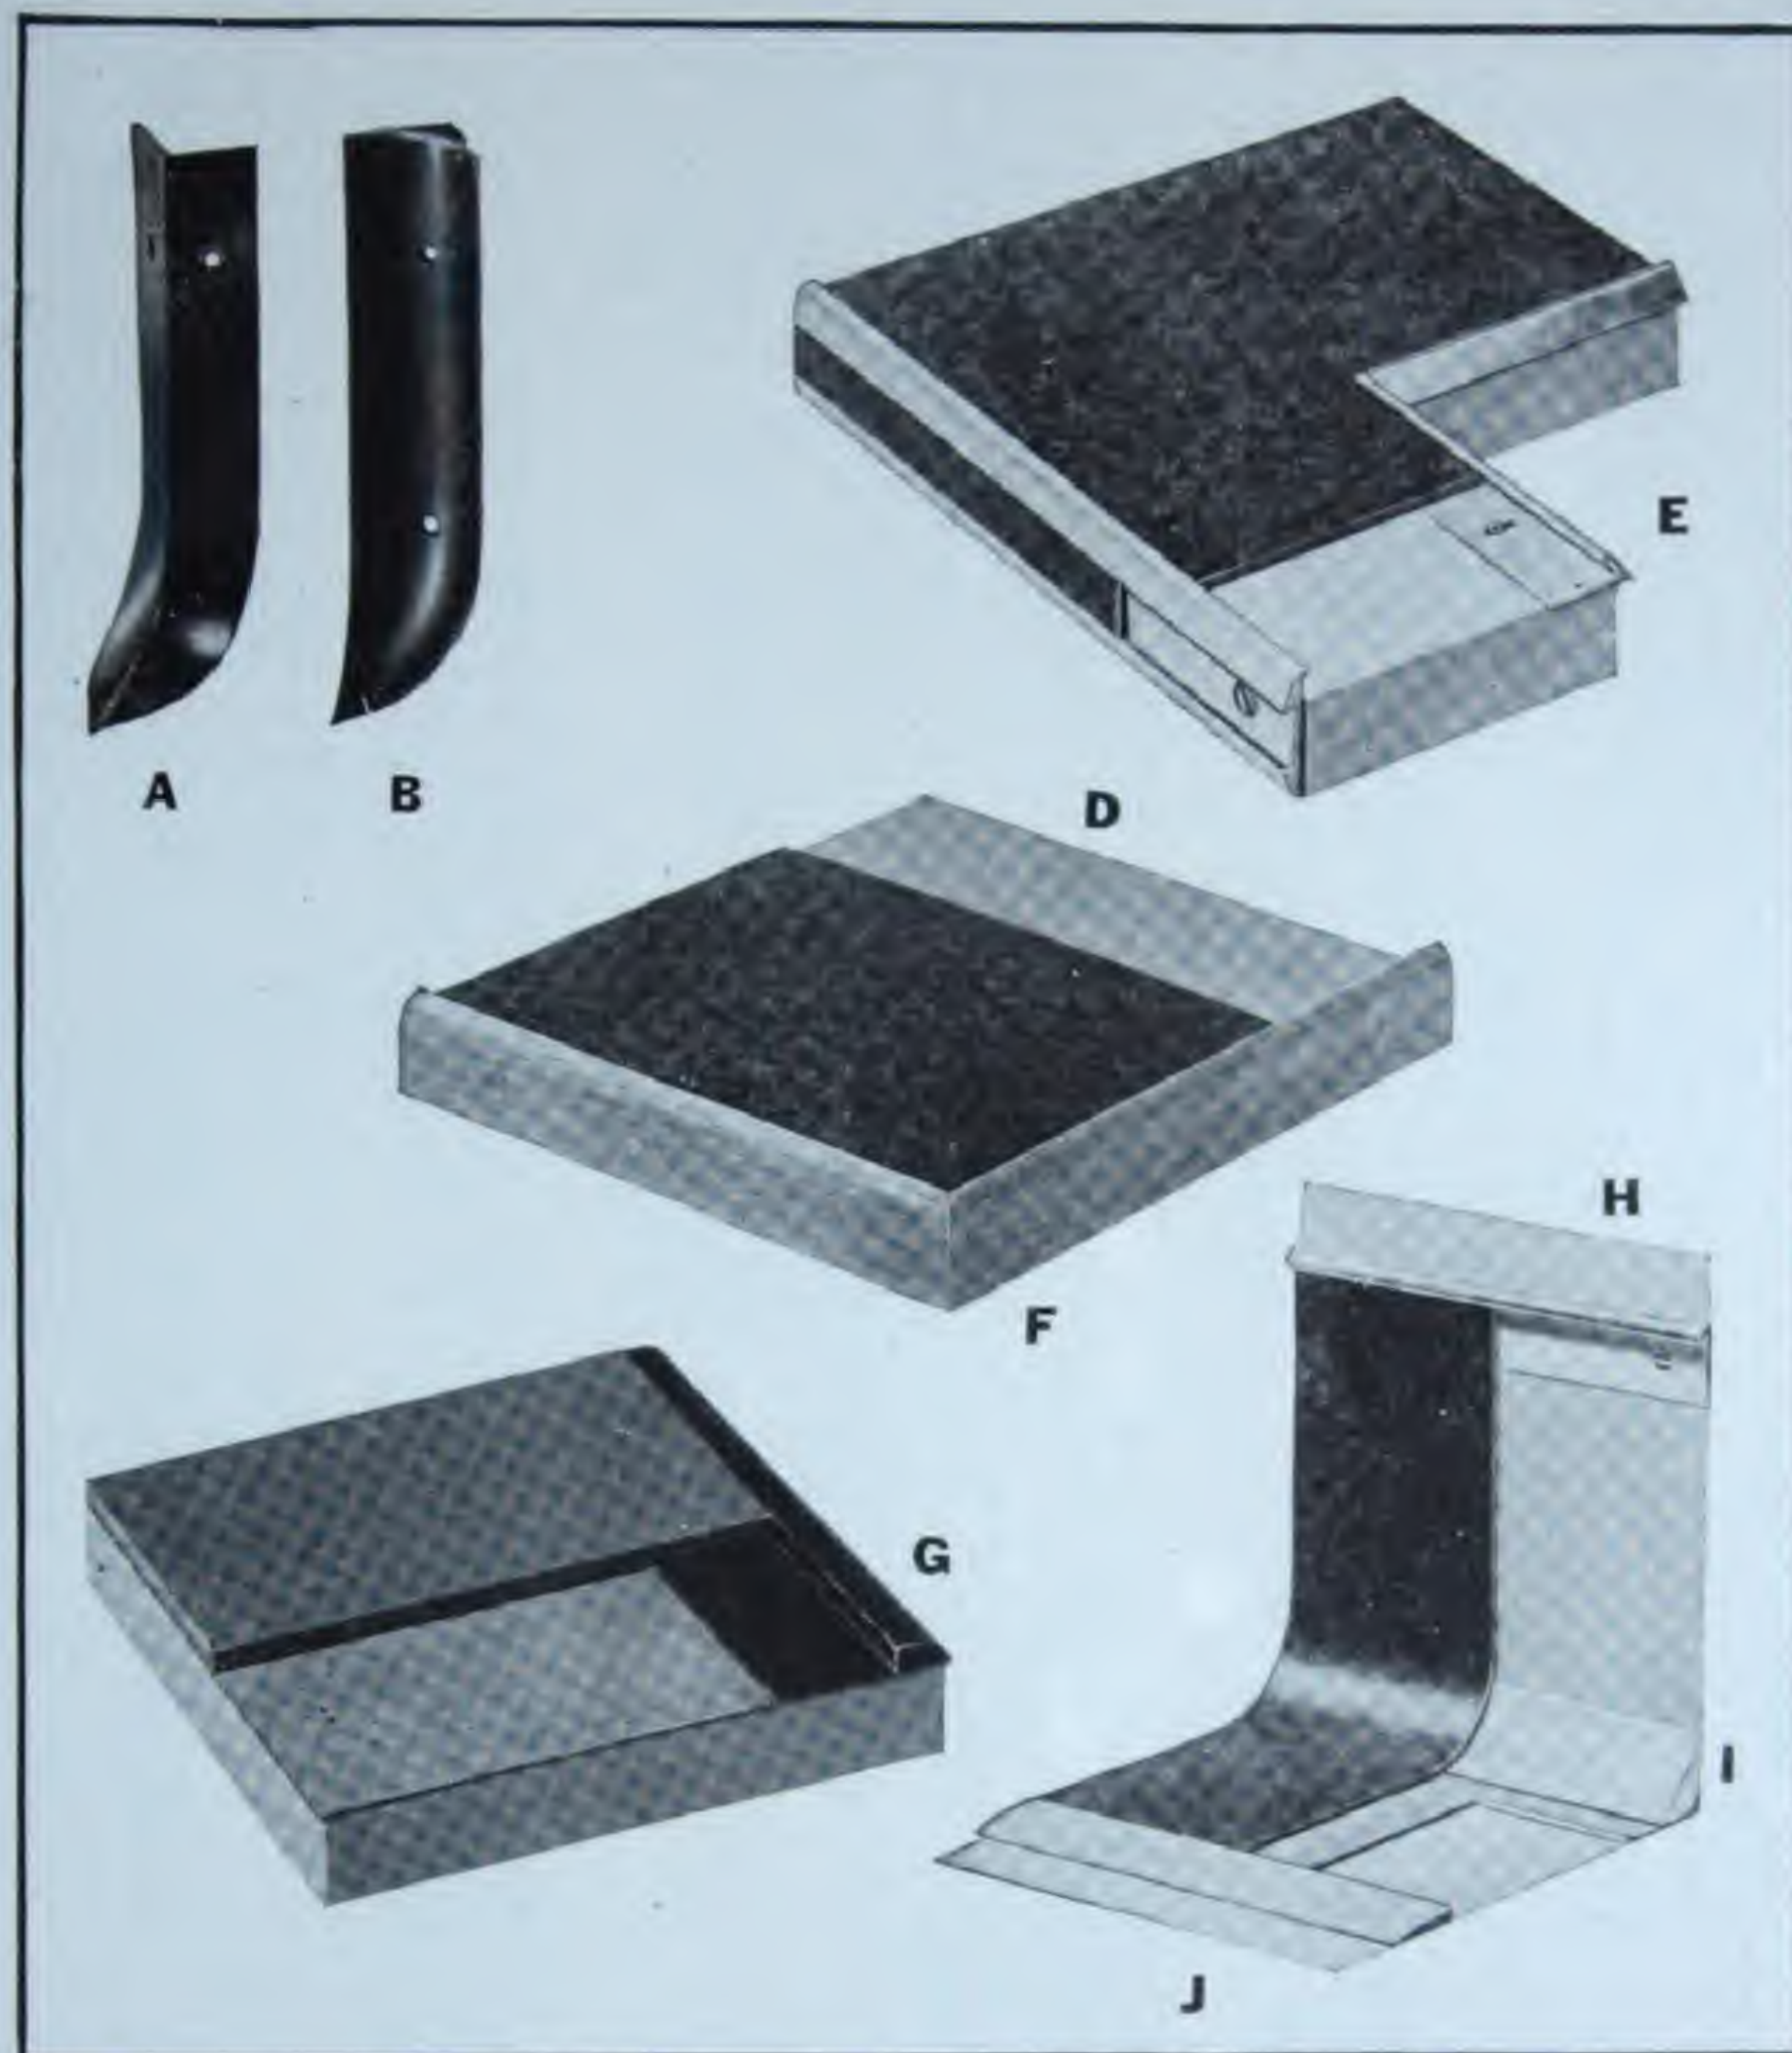

*Metal Corners for Cove Base Installation*

COVE BASE works equally well in finishing off counters. It makes an attractive (and sanitary) continuation into splash boards. Ideal for both domestic and commercial installation.

**DOMINION LINOLEUM . . . more resistant to scratches . . . sheds burns . . . creates original interiors**

# Accessories

## THE ACCESSORIES SHOWN ABOVE ARE CARRIED IN STOCK

**A**—Outside square metal corner—Height 6 inches. Available black enamelled finish, natural aluminum or cast iron.

**B**—Inside round metal corner—Height 6 inches. Available black enamelled finish, natural aluminum or cast iron.

**D**—Combination stainless steel or chrome, and linoleum edging for tables, desks and sink tops.

**E**—Stainless steel or chrome moulding used around sink to prevent water from running under linoleum top.

**F**—Oak nosing for desk and table tops.

**G**—Rubber nosing for AA and AAA Gauge.

**H**—Chrome edge or stainless steel chrome finish moulding for top of cove.

**I**—Wood cove moulding feather edge.

**J**—Oak nosing used also as stop protectors.

# Dominion Linoleum Cements and Wax

*Highly recommended for correct installation and maintenance*

## WATERPROOF LINOLEUM CEMENT

Assures perfect adhesion if applied properly. It is used to prevent surface water from seeping at the seams. Estimate 1 gallon to 10 square yards.

**IMPORTANT:** Linoleum adhesive should not be spread too far ahead of the actual installation of the goods. Adhesive must at all times be "tacky" and in a condition to provide a proper grip.

Size of containers	No. Units per carton	Average Weight in lbs. per carton
Half Pints . . . . .	12	13
Pints . . . . .	12	21
Quarts . . . . .	12	42
Gallons . . . . .	4	56
Four-Gallon Drums . .	per drum	57

## LINOGRIP 55 LIQUID ADHESIVE

Recommended for cementing any type of hard surface flooring by the yard or tiles, over either wood or concrete subfloors. Estimate 1 gallon to 15 square yards. Linogrip should be at least 70°F. before using. After Linogrip is spread on the floor it is recommended to wait a few minutes before installing tiles as adhesive must at all times be "tacky".

Size of containers	No. Units per carton	Average Weight in lbs. per carton
Half Pints . . . . .	12	15
Pints . . . . .	12	26
Quarts . . . . .	12	50
Gallons . . . . .	4	62
Four-Gallon Drums . .	per carton	65

## DOMINION LIQUID WAX

Dominion Liquid Wax gives a lustrous finish to linoleum and is highly recommended as a maintenance wax of hard and durable quality. Available in 1-gallon and 1-quart cans.

Size of containers	No. Units per carton	Average Weight in lbs. per carton
Quarts . . . . .	12	33
Gallons . . . . .	4	40

# The Care of Linoleum

## BASIC PROTECTIVE COATING

A basic protective coating to Dominion Linoleum flooring means assurance of the lowest possible labour (and maintenance costs). The procedure is as follows: To remove surface dirt and grime accumulated during installation, wash the new Dominion Linoleum floor with mild soap and warm water. Make sure, however, that the new floor has had at least a day to "set" before washing. After washing, rinse with clean water and clean mop.

Once the floor is thoroughly dried, apply one thin coat of a good liquid (not self-polishing) or paste wax, preferably with a petroleum base. It is important that Dominion Wax or a similar brand which does not contain turpentine or water base is used. Each area should be evenly polished, with an electric polishing machine after it has had time to dry. The entire procedure should be repeated a second time so that a hard-wearing surface may be built up.

## REGULAR MAINTENANCE IS EASY

### DAILY

Dusting with a broom or dry mopping is all that is needed for day-to-day care.

### WEEKLY

Heavy traffic areas in entrance ways, under desks, in hallways, etc., will possibly require weekly mopping with clean warm water and a clean mop. Washing should be followed

by an immediate buffing until the floor is dry. If necessary, the washed areas may be given a very thin coat of wax after drying, and polished to match the rest of the floor area. It is not necessary to re-wax where your floor is not used, such as close to walls, under furniture, etc. You will usually find that a once-a-week polishing without wax is both desirable and adequate for maintaining the overall area — depending, of course, on the amount of daily traffic it receives.

## PERIODIC MAINTENANCE

The number of times a year linoleum floors must be entirely re-done — cleaned, re-waxed, re-polished — will be determined by the amount and kind of traffic to which they

are subjected. Once in every six- to ten-week period should ordinarily be found sufficient.

## CLEANING

### SOAP AND WATER

Harsh soaps and certain very-strong detergents are harmful to linoleum. Whatever cleaning agent is used it should be mild. The floors should be well rinsed and dried thoroughly afterward. (A linseed oil soap is a good one to use.)

### LIQUID WAX CLEANER

Soap and water cleaning can be eliminated by using a liquid wax cleaner. The wax cleaner softens and loosens collected dirt and grime, permitting it to be wiped up easily with a clean cloth. Although a thin rewaxing is sometimes necessary, there will usually be enough wax left to polish the affected areas satisfactorily.

### VAR SOL

Another method of cleaning, usually in areas of excessively heavy, dirty traffic, is Varsol, and/or rubbing with steel wool. Follow-up by washing with a clean mop and clean water. Allow the linoleum to dry, then wax the area and polish to match the rest of the floor area.

### TIPS

Dirty wax sometimes builds up around baseboards, heavy furniture, file cabinets, etc. To avoid this possibility, stop short your application of wax some sixteen to twenty inches from walls, cabinets, etc. The action of your polishing machine will spread the wax from the main area onto these non traffic sections. And make it a point to apply only thin coats of wax — whatever the occasion. Thick wax coatings will always collect dirt.

## PROTECTION

Linoleum should be protected against indentation from furniture legs (this applies as well to all resilient floors). Remove any sharp leg rests and replace with flat furniture glides. Also replace hard, narrow rollers with soft, wide rubber rollers.

# General Information

**Widths:** Patterns shown can be supplied only in the gauges and widths printed beside each pattern. AA Marboleum, Jaspé and Handicraft made to order in minimum quantity of 1200 sq. yds.

**Lengths:** All lines are rolled in lengths of about 30 yards, with the exception of Rexoleum (standard quality) and Belflor, which are approximately 40 yards; A Cork Carpet which comes in lengths of approximately 25 yards.

**Size of Patterns:** The majority of patterns in this book are reproduced  $1/5$  and  $1/6$  actual size, the exceptions being: Jaspé, Marboleum, Handicraft, Rugs and Mats.

**How Rolled:** All lines are supplied "FACE OUT".

**Substituting:** In order to prevent the possibility of delay in filling an order, we recommend allowing us to substitute nearest pattern in case the design wanted should not be in stock.

**Care in Unrolling:** All floor coverings may crack or break if unrolled when cold, or if allowed to fall heavily on the floor. In cold weather the goods must be left at least twenty-four hours in a warm room before handling.

**Claims for Damages:** Our goods are all carefully inspected before shipment, and should they be damaged in transit through rough handling, etc., mention the fact on the Transportation Co.'s releasing papers over your signature and file claim against the carriers, as in such cases we are in no way responsible.

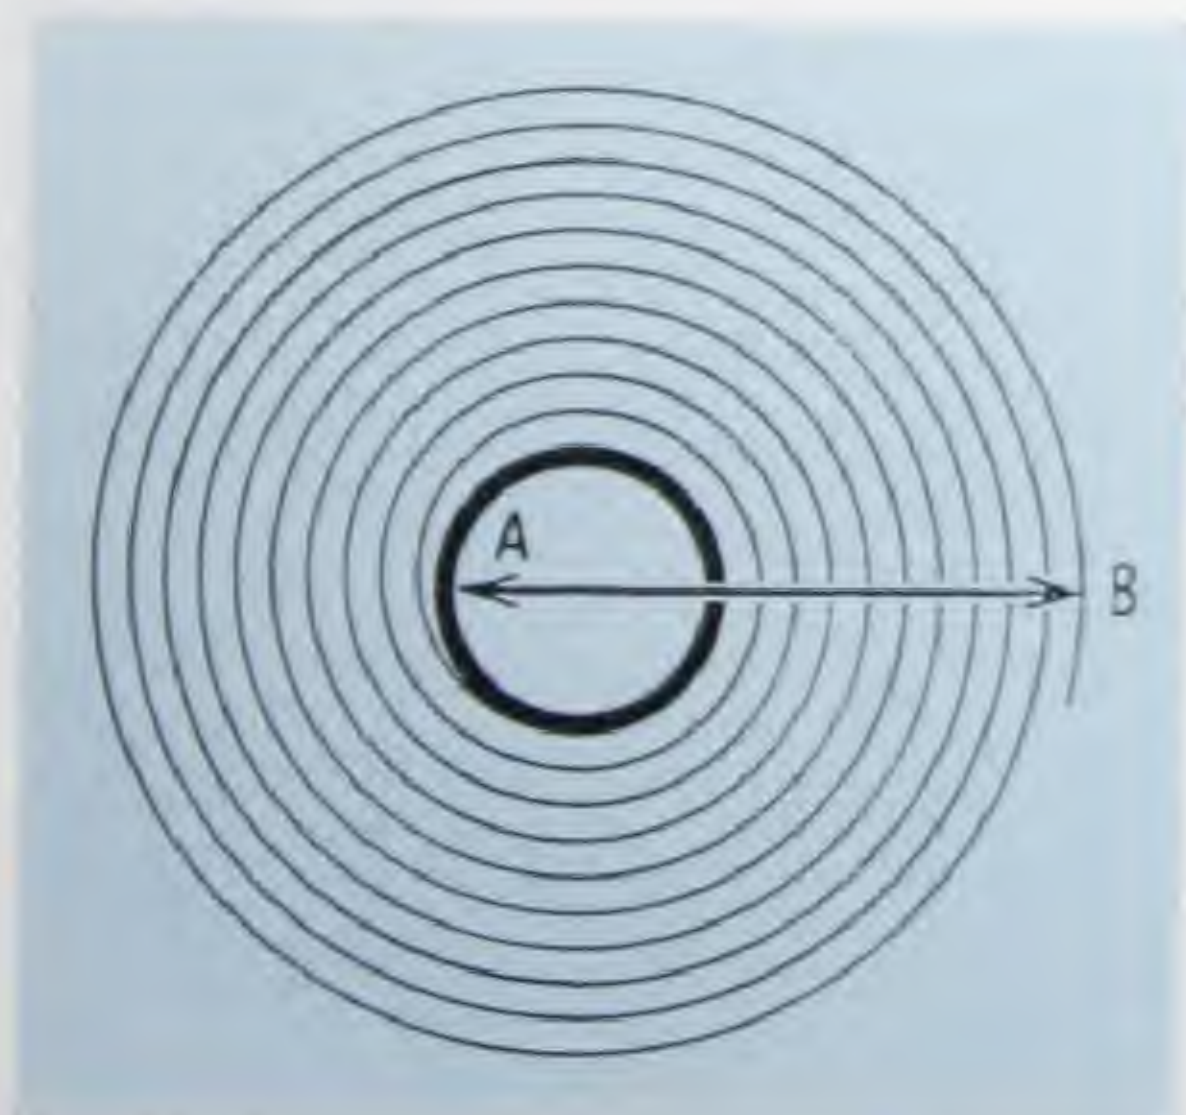

**Telegraph Code:** To designate design number of each pattern see list of CODE WORDS on pages 72 and 104 and the following CODE FOR WIDTHS is to be used in conjunction therewith:

Code word for 18" width . . . . .	"WAMPUM"
Code word for 24" width . . . . .	"WALRUS"
Code word for 27" width . . . . .	"WARBLE"
Code word for 36" width . . . . .	"WARDEN"
Code word for 2 yards width . . . .	"WELKIN"
Code word for 3 yards width . . . .	"WHELTER"
Code word for 4 yards width . . . .	"WHELMING"

**Quantity:** To designate quantity required, use merely the words "five, six, seven," etc., as the word "pieces" will not be necessary.

**Example:** "SIX WELKIN DEFOREST" means "Six pieces 2 yards wide, Pattern 0127."

**NOTICE:** To avoid possible cold cracks, always roll goods "FACE OUT".  
Sand bags must be used when laying canvas back linoleum.

## HOW TO DETERMINE YARDAGE IN ROLL GOODS

Simply measure the mean diameter in inches from the outside of the roll to the inside. Be sure to measure through the opening in the roll on the inside. Count the number of turns in the roll. Use the following plan to get the number of square yards in the roll.

For 6-foot material: If A to B is 8", for example, and there are 30 turns in the roll, multiply  $8 \times 30 \times 0.175$  for the number of square yards in the roll. The answer is 42 square yards.

For 9-foot material: if A to B is 8" and there are 30 turns in the roll, multiply  $8 \times 30 \times 0.26$ . The answer is 62.4 sq. yds.

For 12-foot material: if A to B is 8" and there are 30 turns in the roll, multiply  $8 \times 30 \times 0.35$ . The answer is 84 sq. yds.

Here are the  
modern plant and office  
of  
Dominion Oilcloth & Linoleum  
Co. Limited  
Montreal

# Still Growing...

*from 1 acre in 1872 it has  
extended to 20 acres in 1959*

## Dominion Oilcloth & Linoleum

Founded as a small oilcloth manufacturing firm over 87 years ago by a group of enterprising Canadians, this firm has enjoyed great growth and kept pace with Canada's economic expansion and population increase. Today the company is Canada's largest producer of linoleum in sheet goods and tiles as well as many associated products and ranks high among the world manufacturers of fine flooring. Dominion Oilcloth & Linoleum Co. Limited today occupies over 1,000,000 square feet of floor area with more than 16,000,000 square feet of buildings. Factory operations are almost completely mechanized, are supervised by highly trained specialists. Modern new shipping facilities are in operation. A style-minded staff of design and colour experts are continually working on new designs, patterns and colours. An idea-

## Co. Limited

sparkling marketing department keeps its finger on flooring preferences of Canadian homemakers, businessmen, merchandisers and architects.

In the first years of its operation, Dominion Oilcloth & Linoleum Co. Ltd. produced oilcloth for floor covering. Thirty years later the company began manufacturing linoleum — a thick, homogeneous compound of cork, linseed oil, gum, fillers and colouring matter. The linseed oil content of the new linoleum product was its only relation to the oilcloth which the company had been producing.

"Battleship" was the first linoleum manufactured by the company. Through the years, other linoleum type floorings were added — Marbolem, Jaspé, Handicraft and

associate products. In recent years tile has become increasingly popular for home, business and institutional use and, now, linoleum tile represents an important part of the company's total linoleum output.

The main company products are linoleum, enamelled felt base floor covering, table oilcloth and kindred products, printed plastic film and the latest additions, vinyl tile and asphalt tile.

Now one of the largest all-Canadian manufacturing firms in any industry, Dominion Oilcloth & Linoleum continues its policy of increasing production to keep pace with Canada's rapid growth and the increasing popularity of the company's products in the consumer, commercial and institutional markets.

# Plastic Counter Topping AND Wall Covering

Available  
27" and 54" wide

Counters resist hot water, grease and ordinary household acids . . .

Splash boards are modern, functional and protect your walls . . .

Walls which take rough treatment clean off with a wipe . . .

Installation is simple . . . scissors and wallpaste are all you need.

We're proud of this low-priced new line—  
Adaptable to any budget, any decor.

**NOTE:** Be careful to instruct against using knives or other sharp instruments on this product. Guard it from hot irons or equally hot objects.

WE RECOMMEND LINOGRIP 55 FOR BEST RESULTS.

# Dominion Wall Coverings

## VINYL DOMOLEATHER

A rich, economical wall covering fabric for scores of modern uses.

Almost free of maintenance — the light textured grain and semi-gloss finish resist dirt collection and make it easy to clean, if necessary.

Attractive! Stock Line!

55" wide in a monotone leather-type finish and a modern two-tone finish.

Special colours, finishes and weights readily available for minimum orders of 500 yards.

No painting required.

Contact Dominion Oilcloth & Linoleum Co. Limited for installation recommendations, or consult your experienced wall covering installer.

## DOMESTIC GAUGE LINOLEUM WALL TILES

Monotone effect for feeling of spaciousness — textured to create atmosphere of warmth. Easy to keep clean — stocked in easy-to-handle 9" squares.

## PLASTIC WALL COVERING (AND COUNTER TOPS)

Expensive-looking effects at economy prices — acid and heat resistant . . . alkali proof. Easy to keep clean — available in 27" and 54" widths.

See illustrations on page 99.

DOMINION LINOLEUM . . . more resistant to scratches . . . sheds burns . . . creates original interiors
